**Image Gallery Assignment**

In this assignment you are going to create an image gallery for view on the web. Responsive design dictates that images will be viewed on a variety of devices. As such you will optimize the images in three different sizes.

Obtain 9 images from any free image bank (Pixabay is a good one). Be sure to obtain images that somewhat relate to each other.

Crop the images in three different sizes indicated below and optimize the images for web.

• For desktop viewing & HD: 500 x 500 pixels - jpeg 80 quality. Place these images in a folder entitled "images_a".

• For tablet and laptop viewing: 250 x 250 pixels - jpeg 60 quality Place these images in a folder entitled "images_b".

• For phone and other small mobile device 100 x 100 pixels - jpeg 60 quality. Place these images in a folder entitled "images_c".

Download the attached folder containing the html files. Move each image folder into the website folder. Open the html file and enter the appropriate pathnames so that images appear on the site. When completed, upload to your host server and create links on your WDV131 homework page to those pages.
